

Primavera® Claim Digger™ v3.0 software is the market leading schedule analysis solution enabling organizations to compare P3 project schedules, perform impact analysis, and document delays to the schedule. First release in 1991, the software is in use with over 1600 companies worldwide.

Primavera® Claim Digger™ v3.0 compares two Primavera Project Planner (P3) schedules or updates and provides a report of the changes made between them. It is the number one comparison program of its kind on the market.

1. How does it work?

Primavera® Claim Digger™ is a stand alone software solution that directly reads the P3 data files. You simply select the two schedules you want to compare, push a button, and wait for the software to provide a complete analysis report which can then be printed or viewed.

2. What comparisons does it make?

The program will tell you the following changes to schedules:

- Autocost and Schedule logic rule changes
- Activities that have been added or deleted
- Changes to original and remaining durations
- Changes to constraint types, percents complete, total and free floats
- Changes to activity calendars
- Changes to descriptions
- Changes to activity logs
- Changes to actual starts and finishes
- Adding or Deleting Resources
- Changes to resource and cost budgets, actuals and forecasts
- Changes to resource percents
- Activities that have jumped on or off the critical path
- Added, deleted or changed relationships
- Changes to driving relationships, activity codes and WBS changes
- Activities that should have started or finished in a reporting period - but did not.
- Export reports to Word® or Excel® at the push of a button.

3. What kind of output or report is available?

The menu system gives you the option to print or view detailed comparison reports. The program lets you pick and choose what comparisons you want to make. The program exports to Word® or Excel® at the push of a button. In addition, the complete data analysis of all changes is available in a text file for custom reporting.

4. How many activities or relationships will it handle?

Primavera® Claim Digger™ can handle schedules of any size. The program is fast. It can compare a 1000 activity schedule and compile the resulting report in a little over a minute.

5. How else is Claim Digger™ used?

Primavera® Claim Digger™ can be used to simplify Time Impact Analysis for analyzing and presenting delay issues. It also produces complete documentation of changes to a schedule and the resulting ripple effect.

PRICING

Primavera® Claim Digger™ is priced at \$299 per copy. Primavera's world class customer support is provided for a period of 1 year from the date of purchase. Yearly support renewal is available at 20% of list price.
